IT&S EMAIL Consolidation Project Update

This site was established to provide a central location for information about the *E-mail Consolidation Project*.

The Exchange 2003 Consolidation Project

The Exchange 2003 Consolidation Project was sanctioned by Triad to consolidate the multiple e-mail solutions to a single enterprise wide messaging platform. Triad IT&S is working with all Hospital based IT organizations as well as Microsoft and Geniant (a Microsoft Premier Solutions Partner) to ensure an environment that provides the most efficient, cost effective solution for Triad.

Today, 12 facilities host local mail systems. Electronic messages are being routed between systems with varying levels of success. Mail content, format, delivery consistency, retention, security and directory services are all being delivered with varied levels of success. This project is designed to reduce some of these complexities in our environment.

The current design is an architecture built for maximum availability, a unified corporate directory and consistent message delivery for all Triad users.

An enhanced user access to a messaging system deployed in an enterprise scale to meet Triad's delivery requirements and expectations.

Offer multiple secure access to messaging system that meets Triad's business requirements. Web mail access via browser only clients, wireless access via handheld devices such as RIM (Blackberry), PocketPC (Samsung Devices) or Treo (Palm One). Each solution is robust and scalable to support an enterprise of
